

CHAIN CONVEYOR DATASHEET

CESCO chain conveyors are designed with flexible concept and modular design, for horizontal or slightly inclined conveying of cereals, meals, pellets, and granular products in general. They realise the completely closed conveying of the product, with capability to load and unload the product, even in reversible mode, in several points, with zero loss during the conveying, easy cleaning, maintenance, and safety during operation thanks the complete bolted system used.

They are designed with particular attention to the shape of the internal part of the casing, in order to limit the wear, extend the life of the machine and prevent deposit of product at the end of the conveying operation.

GENERAL CHARACTERISTICS

- Drive and tail stations with rounded shape.
- Tail station equipped with screw chain adjustment and spring-loaded length and shock absorber.
- Chain sprocket bolted to the shaft and divided in 2 parts for easy maintenance.
- Chain flights equipped every 3 m with UHMW-PE scrapers.
- Supports of both the drive and the tail shaft completely external allowing easy bearing maintenance.
